EDUCATION

EURECOM, Sophia Antipolis | Engineering degree programme, ongoing | 2026 – 2029

IUT Nice Côte d'Azur, Sophia Antipolis | BUT (three-year degree) in Networks and Telecommunications, Cybersecurity track | 2023 – 2026

PROFESSIONAL EXPERIENCE

DevOps Engineering Apprentice | Inria Sophia Antipolis · DIANA Research Team
2025 – 2026

- Automated hardware discovery for the SLICES-RI research infrastructure: reserved nodes via POS, collected system specifications in Python and published standardized metadata to MRS/DMI.
- Contributed to deploying a JupyterHub platform on Kubernetes/K3s with Keycloak/OpenID Connect authentication, NFS-backed persistent storage and isolated user environments; validated in practical sessions.
- Automated service configuration and deployment with Ansible and Helm, including Keycloak client provisioning and handling of application secrets, to support repeatable deployments.
- Developed reproducible Python/PyTorch benchmarks on an NVIDIA H100 NVL (94 GB) using MIG profiles; evaluated three LLMs and matrix workloads with throughput, memory and energy metrics.

DevOps Engineering Intern | Inria Sophia Antipolis · DIANA Research Team
2025 · 10 weeks

- Developed a Cisco VLAN configuration generator from NetworkX topologies, automatically identifying VLAN assignments and trunk/access ports to isolate experimental network traffic.
- Built a FastAPI REST API with modular components, containerized the application with Docker and automated configuration deployment with Ansible.
- Automated cross-site bandwidth measurements on the FABRIC research testbed using Python and GitLab CI/CD; secured credentials and stored repeatable test results as pipeline artifacts.

TECHNICAL SKILLS

Containers & orchestration : Docker: containerizing and deploying applications; Kubernetes/K3s: running JupyterHub, isolating user workloads and configuring NFS-backed persistent storage.

Automation & CI/CD : Ansible: provisioning applications, automating Keycloak client setup and deploying services; Helm: Kubernetes application deployment; GitLab CI/CD: pipelines, secrets and artifacts.

Programming & APIs : Python: hardware inventory workflows, network configuration generators and performance measurement; FastAPI: REST API development; Git and Shell scripting.

Networking & systems : Linux administration and virtual machines; Cisco VLAN configuration, access/trunk ports and network topology modeling; bandwidth experiments on FABRIC.

Identity & security : Keycloak and OpenID Connect: integrating centralized authentication, creating clients through APIs and managing service credentials during automated deployment.

GPU & performance : NVIDIA H100/MIG and PyTorch: GPU partitioning, LLM inference and matrix benchmarks; tracking tokens/s, TFLOPS, GPU memory and energy consumption.

CERTIFICATIONS

2026 Stormshield CSNA (Certified Stormshield Network Administrator) | TOEIC: 975/990
2024–2025 Cisco Networking Academy: CCNA 1, 2 and 3 coursework | Certificat Voltaire: 633/1000 (2024)

LANGUAGES

English C1 | French B2+ | Ukrainian: native | Russian: bilingual | Spanish: basic
